INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/FI2004/000583

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	<u>1-11</u>	YES
	Claims		NO
Inventive step (IS)	Claims	<u>1-11</u>	YES
	Claims		NO
Industrial applicability (IA)	Claims	<u>1-11</u>	YES
	Claims		NO

2. Citations and explanations (Rule 70.7)

Cited documents:

D1) WO 03026575 A2

D2) EP 1388537 A1

D3) Science, Vol.282 (1998), pages 737-740

D1 and D2 show closely related compounds. However, these known compounds, which are excluded from the general formula of claim 1 by a disclaimer, have another use than the claimed compounds.

Thus, the invention defined in claims 1-11 has novelty and inventive step.

D3 shows compounds with amide or peptide bonds, which compounds interact with the different subtypes of somatostatin receptors. However these compounds have a different structure than the compounds of the present application.

The invention defined in claims 1-11 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed compounds and their use. Therefore, the claimed invention is not obvious to a person skilled in the art.

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

The term "a disease or condition where interaction with the somatostatin receptor subtype 4 optionally together with subtype 1 is indicated" in claim 11, although indisputably having a pharmacological effect, cannot in itself be regarded as a therapeutic application.

There are an undefined number of diseases which might be related to these pharmacological effects. A practical application needs to be found in the form of a defined treatment of a specified pathological condition, this being an essential technical feature, in order to render claim 11 clear according to Article 6 PCT.
